Cut down your PCR to 15 minutes with SolisFAST® and Mastercycler® X50s

solisbiodyne.com

SolisFAST® mixes from Solis BioDyne, Eppendorf Mastercycler® X50s and Eppendorf Fast PCR Tube Strips – the key to speed and success!

- PCR in **less than 15 minutes**
- **Exceptional sensitivity** with Fast PCR tubes
- Convenient **Ready to Load** mix
- **Unique stability** – up to 2 months at room temperature*
- **Mix with dUTP+UNG** to prevent **carryover** contamination
- Increased **inhibitor tolerance**

Figure 1. Ultra fast PCR with SolisFAST® Master Mix, Ready to Load (Cat# 24-02-00001) using Standard or Eppendorf Fast PCR Tube Strips (Eppendorf, Cat#0030124901) on Eppendorf Mastercycler® X50s. Dilutions of human genomic DNA (5-20 ng in a 10 µl reaction) and 200 µM primers (each) were used to amplify a 481 bp fragment of a β-Actin gene. PCR cycling conditions: Initial denaturation – 1 min at 98 °C; 30 cycles of denaturation – 5 sec at 99 °C, and annealing/elongation – 10 sec at 70.4 °C; final elongation – 1 min at 72 °C. Lanes 1-4: technical replicates of the sample amplified using Eppendorf Fast PCR Tube Strips; lanes 5-6: replicates of the same sample amplified using standard RT PCR Tubes. Samples were analyzed on a 1.5% agarose gel. Total run time 14 min 23 sec. Experiments performed by Eppendorf

* SolisFast® Master Mixes are stable for 2 months at 25 °C, and SolisFast® Master Mixes with UNG are stable for 1 month at 25 °C.

FL-24-01-E-V2

NB! Solis BioDyne is working together with Eppendorf in China, the Middle East, Africa, and Asia Pacific. Public display of the partnership is allowed only in these selected regions.

The Next Stage

Take your PCR to the next level. 10 °C/s heating on an open block format gives you unexpected speed with the Mastercycler® X50s. How fast do you dare to go? Boost your PCR results by combining SolisFAST® Master Mix enzymes with Mastercycler X50 and the corresponding fast PCR tubestrips to go down to a total runtime of only 15 minutes, even with Multiplex PCR.

Network like a pro
Control up to 10 cyclers without a PC or additional hardware and up to 50 cyclers using a PC.

2D-Gradient
Two gradients in the same run allow you to optimize the annealing and the denaturation temperature in parallel.

Touch screen interface
Intuitive and quick programming from the beginning

Fast ramping
With block heating rates of up to 10 °C/s, you will have unrivalled speed at your disposal. Use it for the advancement of science.

Quiet like a whisper
The Mastercycler X50 is designed to be impressively quiet – even during extensive cooling steps.

Dynamic homogeneity
Individual control of all six peltier elements allows optimal heating conditions.

Small footprint
Ventilation from front to back contributes to the small footprint of the Mastercycler X50.

In good company – high quality consumables

A fast enzyme and a fast thermal cycler are nothing without fast PCR consumables. Optimal heat conduction by our thin walled, yet stable fast PCR tubestrips allow speeding up your PCR protocol.
